

AADESH AGRAWAL

Bengaluru, Karnataka

+91 9352767996 aadeshagrawal2002@gmail.com GitHub LinkedIn Leetcode

Education

Malaviya National Institute of Technology, Jaipur

Aug 2019 – May 2023

Bachelor of Technology in Electronics and Communication

Experience

Oracle (Oracle Financial Services Software)

June 2023– Present

Software Developer

Bengaluru, India

- Designed a **real-time alert framework using Server-Sent Events (SSE) leveraging Kafka** to support horizontal scaling to notify branch tellers of payment transactions instantly, enabling faster alerts and approvals, and **reducing supervisor approval time by over 50%**.
- Contributed to **OBBRN Standalone Cloud SKU design**, enabling independent deployment and seamless integration with any foreign system, preparing OBBRN for cloud-native delivery.
- Developed a **metadata-driven MCP client–server architecture** enabling real-time, conversational account inquiry and transaction processing across multiple banking domains, reducing teller processing time by **80%**.
- Built a **fallback mechanism for missed OBPM notifications** by validating transaction status directly, improving reconciliation efficiency by **25%**.
- Enforced **AI-powered error recovery assistance**, helping to resolve transaction errors and **increasing user efficiency by 34%**.
- Adopted a **log archival system**, optimizing **journal performance by 34%** via scheduled archiving and purging strategies.
- Delivered a **multi-mode closeout withdrawal feature** enabling account closure via **Account, Cash, or GL**, improving teller efficiency and operational flexibility.
- Actively involved in product sustenance and support efforts, **resolving 11% of outstanding production bugs**, improving system stability through **proactive defect analysis** and **functional issue resolution**.
- Continuously improved **code coverage**, achieving a **27.8% increase** in overall coverage.

Oracle (Oracle Financial Services Software)

June 2022– July 2022

Software Intern

Bengaluru, India

- Contributed to maintain automated test suites and executed functional test cases for teller transactions, contributing to a **25%** reduction in manual test backlog and supporting faster sprint closures.
- Automated **150+ UI and API** test cases using **Selenium** and **RestAssured**, **increasing coverage by 70%** and **reducing regression time by 66%**.
- Optimized teller transaction testing workflows by implementing **robust automation**, cutting manual testing efforts by **75%** and accelerating test execution speed resulting in faster and more reliable releases

Project

Semantic Book Recommendation System | Python, LangChain, Matplotlib, Gradio

GitHub

- Engineered an **AI-powered semantic book recommendation system** using **LangChain, Hugging Face Embeddings, and Chroma** to match user queries with contextually relevant books.
- Integrated **sentiment analysis models** to enable **emotion-aware filtering** based on user intent.
- Built an interactive **Gradio dashboard** enabling **real-time, user-driven recommendations with dynamic category and tone selection**.

Technical Skills

Languages: Java, C++, JavaScript, Python

Technologies/Frameworks: Spring Boot, Node Js, Kafka, Jenkins, LangChain

Databases: Oracle, MySQL

Testing: JUnit, RestAssured, Selenium

Concepts: Data Structures and Algorithms, Object Oriented Programming, DBMS, Operating Systems

Achievements

- Solved **700+ DSA problems** across **LeetCode, InterviewBit, and GeeksforGeeks**.
- Achieved **AIR 9277** in **JEE Mains** out of **1.2 million**; **top 5%** in **JEE Advanced**
